

Recycle?

How Recycling Helps the Environment

Jonathan Sturholm

Grade: 4

2nd Place - Grades 3rd to 5th

Palma Ceia Elementary School

Some of you may think, why should I recycle, I'm going to tell you why.

First of all, recycling means to use again. When you throw something away, it goes to a big heap of waste, and other stuff that was thrown away. Instead of throwing away things that can be recycled, recycle them. Some things to recycle are cans, bottles, cardboard, paper and plastics. When you recycle paper it saves trees, which means saving animals because animals live in trees. Cans are made into baseball bats, more cans, and aluminum foil. Recycling can also be turned into cardboard and plastic.

Recycling helps make our air cleaner, because the factories that make products pollute the air with smoke. You can also take bad fruits and vegetables that can't be eaten to a compost bin where it can be turned into very, very good soil. Although it sometimes smells, it is very good for the environment. Believe it or not, you can recycle clothes. To do this, take your clothes to a thrift store where they are sold to other people.

Well now that I've told you how recycling helps the environment, so now it's your time to do your part!
